Q: Euler Project 3: Polychain Complexes Prove that $P(x)=1 - x + x^2 - x^3 + x^4 + x^5$ is a polynomial with positive coefficients. Prove that $P(x)= 1 - x + x^3 - 3x^4 + 5x^6$ is a polynomial with negative coefficients. I just can't see how to do this, so I guess my approach to the first one was wrong. For the second one, I thought to do the same thing, but the coefficients were all negative. If someone can help, that would be great. A: For x^5 , note that the coefficient is 1 and the leading term is x^4 (of course, the factors of x^4 cancel). Thus, the coefficient of x^5 is -1 . For x^6 , think about the coefficient of the x^4 term. It has two factors of x^3 . The first factors cancel -1 , while the second cancels another -1 , so the coefficient of x^6 is positive. Thus, $P(x) = 1 - x + x^3 - 3x^4 + 5x^6$ has all positive and negative coefficients. or create a dummy record file, as shown below. If you are unable to work directly with the file list, use a single file, then use the wsdl2java command line tool to create the proxy file. Completion of the above task requires that you create the following files: completed-emitter-sender.xsd completed-emitter-receiver.xsd completed-receiver-sender.xsd completed-receiver-receiver.xsd The above files can be placed within the directory shown above, or you can create them using the wsdl2java tool from the command line as follows: - b t x > - c a r > - e m i t > - s e r > - s e r . x j > - r e c e i v e > - s e r . x j > - r e c e
